SUMMARY

Software Engineer focused on building scalable, user-centered applications across web, mobile, desktop, and backend platforms. Experienced in full-stack development with React, React Native, Electron, FastAPI, Python, TypeScript, and SQL, with an emphasis on clean architecture, performance optimization, and intuitive UX. Designed and built Decibel, a cross-platform music streaming system spanning web, mobile, desktop, backend, and Discord integration — strengthening skills in REST API design, database modeling, authentication, and real-time interactions. Eager to bring this experience to a team building real-world products.

SKILLS

LANGUAGES

Bosnian

English

EXPERIENCE

02/2025 –

05/2025

Zenica, BiH

Fullstack Developer

Una Film Distribucija

Built a full-stack movie/news distribution platform solo, using React + Vite (frontend) and Node.js/Express (backend), with a Sequelize ORM data layer over SQLite. Designed and implemented a RESTful API covering movies, news, messages, and admin management, including status-based filtering (now showing / coming soon / archive) and search endpoints. Developed an admin dashboard with authentication for content management (CRUD operations on movies and news). Implemented file upload/download handling (Multer) for database backups and image assets. Documented the API with Swagger and deployed the backend to Railway.

EDUCATION

2022 – 2026

Zenica, BiH

Software Engineer

✉ Polytechnic Faculty

2018 – 2022

Kakanj, BiH

Mining Technician

✉ Mixed secondary school Kakanj

Decibel

Multiplatform streaming service

Designed and built a full-stack music platform across five components: web (React/TypeScript + Vite), mobile (React Native), desktop (Electron), a Discord bot (Python), and a FastAPI backend with SQLAlchemy over async MySQL and Firebase Storage for media files. Features include music discovery, playlists, user/artist following, media session integration, and Discord rich presence.

Una Film Distribucija

Web App

 [Hamza9199/UnaFilm](#)

Solo-built a full-stack web platform for browsing movies, trailers, and film industry news. Backend: Node.js/Express REST API with Sequelize ORM over SQLite, Swagger documentation, and Multer-based file upload/download for database backups and images. Frontend: React + Vite with status-based movie browsing (now showing / coming soon / archive), search, and a secured admin dashboard for content management. Deployed on Railway.

Portofolio

Web App

 [Hamza9199/Portofolio](#)

Built an interactive personal portfolio with Next.js, featuring 3D models and animations via React Three Fiber and Framer Motion. Includes a contact form (react-hook-form + EmailJS) and full internationalization across Bosnian, English, and German.

ForgeAI

Plugin, Web App

 [SafetImamovic/ForgeAI](#)

Co-built a web platform that generates MIDI files from natural language prompts using the Google Gemini API. Contributed across the stack: Django backend handling prompt processing and Gemini API integration, a custom algorithm converting Gemini's JSON responses into MIDI format, Stripe-based subscription/payment handling, and the HTML/CSS/JS frontend.

Audio System

Desktop App

 [SafetImamovic/AudioSystem](#)

Co-built a desktop music streaming application in C++ (Windows Forms), applying object-oriented design principles — classes, inheritance, and modular architecture — to handle local audio file browsing, playback, volume control, and track skipping.
