

Decibel

Multiplatform streaming service

Designed and built a full-stack music platform across five components: web (React/TypeScript + Vite), mobile (React Native), desktop (Electron), a Discord bot (Python), and a FastAPI backend with SQLAlchemy over async MySQL and Firebase Storage for media files. Features include music discovery, playlists, user/artist following, media session integration, and Discord rich presence.

Una Film Distribucija

Web App

 [Hamza9199/UnaFilm](#)

Solo-built a full-stack web platform for browsing movies, trailers, and film industry news. Backend: Node.js/Express REST API with Sequelize ORM over SQLite, Swagger documentation, and Multer-based file upload/download for database backups and images. Frontend: React + Vite with status-based movie browsing (now showing / coming soon / archive), search, and a secured admin dashboard for content management. Deployed on Railway.

Portofolio

Web App

 [Hamza9199/Portofolio](#)

Built an interactive personal portfolio with Next.js, featuring 3D models and animations via React Three Fiber and Framer Motion. Includes a contact form (react-hook-form + EmailJS) and full internationalization across Bosnian, English, and German.

ForgeAI

Plugin, Web App

 [SafetImamovic/ForgeAI](#)

Co-built a web platform that generates MIDI files from natural language prompts using the Google Gemini API. Contributed across the stack: Django backend handling prompt processing and Gemini API integration, a custom algorithm converting Gemini's JSON responses into MIDI format, Stripe-based subscription/payment handling, and the HTML/CSS/JS frontend.

Audio System

Desktop App

 [SafetImamovic/AudioSystem](#)

Co-built a desktop music streaming application in C++ (Windows Forms), applying object-oriented design principles — classes, inheritance, and modular architecture — to handle local audio file browsing, playback, volume control, and track skipping.
